What aspects of personality does this tell me about?

There has been much research on how people describe others, and five major dimensions of human personality have been found. They are often referred to as the OCEAN model of personality, because of the acronym from the names of the five dimensions.

Openness to Experience/Intellect

High scorers tend to be original, creative, curious, complex; Low scorers tend to be conventional, down to earth, narrow interests, uncreative.

You enjoy having novel experiences and seeing things in new ways. (Your percentile: 96)

Conscientiousness

High scorers tend to be reliable, well-organized, self-disciplined, careful; Low scorers tend to be disorganized, undependable, negligent.

You are neither organized or disorganized. (Your percentile: 41)

Extraversion

High scorers tend to be sociable, friendly, fun loving, talkative; Low scorers tend to be introverted, reserved, inhibited, quiet.

You are neither particularly social or reserved.

(Your percentile: 59)

Agreeableness

High scorers tend to be good natured, sympathetic, forgiving, courteous; Low scorers tend to be critical, rude, harsh, callous.

You are neither extremely forgiving nor irritable.

(Your percentile: 57)

Neuroticism

High scorers tend to be nervous, high-strung, insecure, worrying; Low scorers tend to be calm, relaxed, secure, hardy.

You are a generally anxious person and tend to worry about things.

(Your percentile: 90)

What do the scores tell me?

In order to provide you with a meaningful comparison, the scores you received have been converted to "percentile scores." This means that your personality score can be directly compared to another group of people who have also taken this personality test.

The percentile scores show you where you score on the five personality dimensions relative to the comparison sample of other people who have taken this test on-line. In other words, your percentile scores indicate the percentage of people who score less than you on each dimension. For example, your Extraversion percentile score is 59, which means that about 59 percent of the people in our comparison sample are less extraverted than you -- in other words, you are neither introverted or extroverted. Keep in mind that these percentile scores are relative to our particular sample of people. Thus, your percentile scores may differ if you were compared to another sample (e.g., elderly British people).

More from the author of this website

When I'm not running personality studies online, I like to cook. I've just finished writing a book called *Cooking for Geeks*, which shows you how to turn out great tasting food while having fun making it. Take a look at the website, at www.cookingforgeeks.com or order the book now from amazon.co.uk or amazon.com.

Where can I learn more?

If you'd like to learn more about personality psychology, take a look at [these links](#) to other personality sites on the web. Take a look at [our homepage](#) for more tests!

Do you want to learn to cook? You'd probably like a book I've written, [Cooking for Geeks](#). If you're an analytical thinker who wonders how things work, [take a look on Amazon.com!](#)

How do I save my results? How can I share them?

It's easy to bookmark your results, or even link to your results on web pages and blogs. You can also email your results to friends! All you need to do is copy the URL from this results page, which has the result scores but none of your private responses.

You can copy and paste the following HTML code into almost any website.
