Proposal for work on Mann Library's E-Reserve Web Server Project

September 13, 1996

databeast, Inc. agrees to provide consulting services and software as
specified below, incorporating by reference Mann Library's product
requirements as documented by William Garrison 8/28/96 in the First Draft
of the "Saunders Contract Specs".

This work includes:

  1a: Investigate Kerberos authentication alternatives, including use of
        CIT's FrontCar Macintosh client (under development with no current
        delivery date available) and development of alternatives.
        Testing and analysis to be completed by October 1, 1996.

        100 hours maximum.

  1b: If required, develop an alternative to FrontCar as specified.
        This will be delivered in beta form on or before November 1, 1996.

        200 hours maximum.

   2:   Develop the Campus QI Database Query Utility as specified.
        This will be delivered in beta form on or before November 1, 1996,
        unless the FrontCar alternative is required, in which case it will
        be delivered in beta form on or before December 1, 1996.

        200 hours maximum.

   The final source and binary versions of these products will be
delivered on or before January 1, 1996, and will be wholly and completely
the property of Cornell University.

   databeast, Inc. will bill Mann Library $27/hour against a standing PO
for the number of hours worked as incurred on each component of the
project (with a maximum of 500 hours, for a maximum total of $13,500).

thanks,
bonze

X-Status:

Kevin,

**After talking some more with Tom Weyer, we've decided that waiting for CIT
to complete development on their FrontCar plug-in puts us in too precarious
a position. Tom left Cornell yesterday to work for Apple.** Someone else is
going to take over the development of their FrontCar plug-in (it might be
Pete Bosanko), but Tom wasn't sure exactly when, or when we would get a
copy of their beta.

So, we'd like you to postpone development of the QI lookup application and
start working on our own version of FrontCar, which we'll call "Agent
Kerberos". Instead of a WebStar plugin, we'd like you to develop Agent
Kerberos as a scriptable application, using the AppleScript dictionary from
the original FrontCar applet as the AppleEvent interface. **<u>Agent Kerberos</u>
should provide the same functionality as this FrontCar applet, which is
basically to contact the user's SideCar server to request an authenticated
Kerberos ticket, verify that the ticket's authenticity, and then return
their Network ID as a string or return an error message.**

On our E-Reserves web server, I've put copies of the FrontCar applet
distribution, and source code for CIT's Mac Kerberos versions 1.5 and 1.6.2
and information about the FrontCar AppleScript interface. Please take a
look. The Kerberos stuff can be found at the CIT ftp server, but the
FrontCar stuff is not publically available.

<http://landru.mannlib.cornell.edu/dev/>   Pre-alpha FrontCar AppleScript
applet
<ftp://ftp.cit.cornell.edu/pub/mac/kerberos/restricted/KClient/>
KClient 1.6.2 control panel and API
<ftp://ftp.cit.cornell.edu/pub/mac/kerberos/restricted/appl/>   Sample
applications with source code
<ftp://ftp.cit.cornell.edu/pub/mac/kerberos/restricted/source/>   KClient
1.5 source code

I'm going to be out today and tomorrow (back on Monday) and I know that
you'll probably have some questions, so give me a call or an e-mail next
week.

**If you think that you'll need to re-estimate your proposal given our change
in direction toward developing our own Kerberos authentication app, please
let Tim [Lynch] know <mailto:tjl3@cornell.edu>.**

Thanks!

Bill
